

## CHILDREN'S ORTHOPAEDIC & SCOLIOSIS SURGERY ASSOCIATES

Specialties: Pediatric & Adolescent Orthopaedics and Spinal Deformity Surgery

Children's Orthopaedic and Scoliosis Surgery Associates, LLP is a patient-based center of excellence for the treatment of all orthopaedic conditions in children and adolescents and is proud to be listed in the *Doctor's of Distinction* and listed in the "Best Doctors" again this year. Our specialized physicians are able to care for a wide range of diagnoses that are unique to the pediatric and adolescent patient. This includes acute fracture care and sports injury-related problems, to lifelong or chronic conditions in children such as scoliosis and limb deformity. Because each of our surgeons care for a range of problems, our practice has the capacity

and experience to treat the patient from infancy, through childhood and into late adolescence.

Dr. Neustadt and Dr. Hahn perform more scoliosis surgery than any other practice in West Central Florida and have one of the busiest scoliosis reconstruction practices in the nation. They have pioneered the use of image-guided navigation in scoliosis surgery and teach visiting surgeons from around the country who are interested in learning how to use this type of intraoperative navigation. Dr. Beck has received special training in the use of the Fassier-Duval rod system for the treatment of children with long bone

deformities due to osteogenesis imperfecta. Dr. Warnick and Dr. Benfanti bring a new area of expertise to the practice: pediatric and adolescent sports medicine. Not only do our physicians possess an abundance of experience, their knowledge of pediatric orthopaedic surgery has led to the well-earned recognition as the most respected pediatric orthopaedists within the Tampa Bay medical community. Our offices are located in St. Petersburg and Tampa, with satellite locations in Sarasota and Brandon.
